

# Elevated AI Launches as an AI Venture Studio That Both Builds Production-Ready AI Products and Helps Organizations Adopt AI

An operator-led AI venture studio brings real AI products to market, including a live AI voice platform that has already processed more than 1,900 calls and a new AI compliance-documentation engine entering the market with early manufacturing partners, while offering AI Transformation and AI Governance services that take companies beyond pilots and demos.

---

LOS ANGELES, CA — June 17, 2026 — Elevated AI ([ElevatedAI.io](https://ElevatedAI.io)) today announced its formal launch as an AI venture studio and holding company built on two equal pillars: it designs, builds, and operates a portfolio of production-ready software-as-a-service (SaaS) products, and it helps organizations adopt AI through hands-on AI Transformation and AI Governance services. Unlike consultancies that ship slide decks or accelerators that fund outside founders, Elevated AI builds and runs its own AI products end to end, then brings that same operator-level expertise to clients adopting AI in their own businesses.

The product side of the studio is anchored by two flagship platforms: Call Logic, a live AI-powered voice and call-center platform that has already processed more than 1,900 calls, and FloForge, a new AI documentation engine entering the market with early manufacturing partners. The services side helps mid-market and enterprise organizations move from AI experimentation to real operational impact, and to do it responsibly.

The launch formalizes a model Elevated AI has been refining for more than a year: operate like a studio, not an agency. Each product in the portfolio serves as both a revenue path and a proof point, and that real-world product experience is exactly what makes the studio's consulting different. Every recommendation comes from a team that has shipped and operates AI in production, not just advised on it.

## An AI Venture Studio Built for Real-World Results

The AI market is crowded with demos, pilots, and proofs of concept that never reach production. Elevated AI was founded on the opposite premise: that the most valuable AI is the kind already running in the real world.

"There is no shortage of impressive AI demos. What's rare is AI that businesses actually depend on every day," said Marian Benymin, Vice President of Growth at Elevated AI. "We build products the way a film studio develops a slate: each one is real, each one stands on its own, and each one proves what the studio can do. Call Logic and FloForge are examples of

our approach: practical AI products designed to solve expensive operational problems in the real world. And because we run AI in production ourselves, when we help a client adopt AI, the advice is grounded in what actually works."

As a venture studio, Elevated AI retains meaningful equity in each product it builds, with the long-term option to spin individual products out into independent companies while continuing to operate shared infrastructure, design systems, and engineering talent across the portfolio. The result is a compounding advantage: every product the studio ships makes the next one, and every client engagement, faster, sharper, and more capable.

## Call Logic: AI Voice Intelligence, Automated

Elevated AI's most mature platform, Call Logic ([GetCallLogic.com](https://getcalllogic.com)), is a multi-tenant, AI-powered voice platform that turns everyday business phone calls into structured intelligence and automated action. Now live and already having processed more than 1,900 calls, Call Logic combines an AI voice agent, a built-in CRM, and a Post-Call Intelligence Engine (PCIE) that automatically generates daily call reporting, follow-up emails, and support tickets. Its tagline: "Voice Intelligence, Automated."

At the center of the platform is Korra AI, Elevated AI's business assistant. Korra goes beyond transcription: it answers cross-system data queries, executes actions with confirmation, triggers event-based automations, and, on the Enterprise tier, places outbound calls with custom voice cloning. For agencies and mid-market organizations drowning in missed calls and manual follow-up, Call Logic captures every conversation, routes the right action automatically, and keeps a complete record in one place.

In one recent inbound call, a homeowner who asked whether they were speaking to a person stayed on the line for nearly eight minutes to resolve two service issues with the AI agent, which diagnosed the problems, captured a complete service request, and was automatically classified by the platform as a positive interaction.

Call Logic is offered with direct enterprise pricing designed to deliver clear ROI against legacy contact-center contracts that routinely cost thousands in setup plus thousands more per month. Businesses interested in a pilot can request access at [GetCallLogic.com](https://getcalllogic.com).

## FloForge: AI-Generated Compliance Documentation for Manufacturing

Elevated AI's newest flagship, FloForge ([FloForge.pro](https://floforge.pro)), targets one of manufacturing's most stubborn and costly bottlenecks: regulated documentation. FloForge is an AI-powered SaaS tool that automatically generates the AS9100 and ISO 9001 process documents that electronics and aerospace manufacturers are required to produce, including travelers, process sheets, and work orders. The product is currently entering the market through an early-access program with manufacturing partners.

Producing compliant documentation by hand is slow, error-prone, and a frequent point of audit failure. FloForge is designed to address this directly, generating structured documents with the routing, traceability, serialization, key-characteristic capture, and approval hierarchies that AS9100

and ISO 9001 demand, complete with electronic signatures, audit trails, and linked work instructions. For quality teams under pressure to scale output without expanding headcount, FloForge is built to turn days of documentation work into minutes.

Manufacturers and quality leaders can learn more and join the early-access program at [FloForge.pro](https://FloForge.pro).

## AI Transformation and AI Governance Services for Organizations Adopting AI

Alongside its product portfolio, Elevated AI offers consulting services designed for organizations that want more than pilots and proofs of concept. These services are delivered by the same team that builds and operates the studio's in-market AI products, a level of hands-on, production-tested expertise most advisory firms cannot match.

AI Transformation Services provide structured, end-to-end AI adoption focused on real operational impact. Rather than one-off experiments, Elevated AI helps companies identify high-value opportunities, integrate AI agents and automation into existing tools and workflows, and reach measurable outcomes that replace operational friction, not people.

AI Governance Services help organizations design, document, and manage AI responsibly as regulation, audits, and risk scrutiny intensify. As AI moves into core operations, businesses need clear policies, documentation, and oversight to deploy with confidence, and Elevated AI brings practical, battle-tested frameworks rather than theory.

Organizations interested in AI transformation or governance engagements can get in touch at [ElevatedAI.io](https://ElevatedAI.io).

## A Growing Portfolio of AI Products

Call Logic and FloForge headline a broader and growing slate of products under the Elevated AI umbrella, spanning AI-powered content creation, creative production tooling, and SEO-driven consumer applications. The studio's stated ambition is to grow several times larger than any single product, building a durable engine for launching practical AI software, and for guiding clients through their own AI adoption, across industries.

"Our goal is simple: keep shipping AI products that businesses can rely on, help organizations adopt AI the right way, and let the results speak," added Benymin. "Every product we launch, every client we serve, is evidence that the studio model works."

## About Elevated AI

Elevated AI is an AI venture studio and holding company headquartered in Los Angeles, California. It designs, builds, and operates a portfolio of production-ready AI SaaS products, and helps organizations adopt AI through AI Transformation and AI Governance services. Founded by full-stack technical operators, the studio specializes in AI integration and LLM orchestration, voice and telephony systems, and applied AI for regulated and operations-heavy industries. Its portfolio includes Call Logic, a live AI voice and call-center platform, and FloForge, an AI compliance-documentation engine for manufacturing now in early access, among other products in

active development. Learn more at [ElevatedAI.io](https://ElevatedAI.io).
